

Remote Keyless Electronic Access Control System

Rentallock® is excited to introduce the RL100 Access Control System. The RL100 combines the versatility of a Network based management system, the sophistication of a top of the line Electronic Access Control System and the security and safety of a commercial grade lockset.

The RL100 is a complete electronic access control system designed to overcome the unique problems associated with controlling facility access from remote locations with greater ease. The exclusive eKey technology of the RL100 provides management the ability to generate a unique eKey for each user, allowing access for a specific period of time. RL100's eKey technology eliminates the burden of on-site door control for the facility manager and reduces the costs associated with key management.

The RL100 is an ideal solution for time-shares, condominiums, resorts, military housing, corporate housing, educational housing, conference centers, meeting facilities, storage facilities, remote facilities or any facility requiring time based controlled access.

RL100 with Satin Chrome Finish and Standard Core

Benefits and Features

Special Features

Non-Damaging to existing door. The RL100 installs into a standard ANSI 156.2 door prep, with no additional holes required.

The RL100 is the only fully weatherized one sided access control device available.

Audit trail records last 250 door events, including user, date and time.

99 programmable user codes available for anytime access to the device.

Each user code has the ability to be assigned as a manager, providing the ability to lock the door open or closed.□

□

Made in the USA.

eKey Features

Each eKey generated is date and time sensitive, allowing access only during the authorized period.

Unique 10 digit code is generated for each user.

Each eKey enabled device has the ability to be unique or several devices in each facility can utilize the same eKeys.

PIN customization allows users to enter a custom 4-9 digit PIN in lieu of the eKey and PIN will remain active for the eKey authorized period.

eKeys can be generated for up to 250 days.

Maintenance eKeys allow one day access for any 2 to 24 hour period without deleting the custom user PIN.

Programming Features

Each device is programmed and audited via infrared communication. No pig tails or serial plugs necessary.

Allows audit of individual access control devices.

Provides device diagnostic tools, including audit trail, device diagnostic and status reports.

Customization of device settings, including date and time, unique device identifier code, User Codes and Open Delay.

Flash ROM allows for software upgrades via infrared communication. No board or chip swapping is required.

User code programming packages available via the Internet Manager.

*A compatible Windows® CE® or PocketPC® device is required for programming of all Rentallock devices. Rentallock only supports tested and compatible devices. For a list of compatible devices please visit www.rentallock.com.
