

True flexibility, manage your devices from any computer in the world.

Rentallock is committed to freeing companies from traditional Device Management software and its hidden costs, high failure rates, unacceptable risks, and protracted implementations; all while providing comprehensive, flexible device management solutions that meet the needs of businesses of all sizes, from the world's largest enterprises to small and mid-sized companies everywhere.

The Rentallock Internet Manager, as an on demand service, has no software or hardware to buy, install, maintain, or upgrade. This equates to savings of as much as 90% compared to similar client/server solutions. The Internet Manager's subscription pricing includes everything you need, so that unlike other device management software, you won't be surprised later by hidden technology costs that can quickly add up to big dollars.

The Internet Manager minimizes the financial risk involved in implementing electronic access control devices by eliminating the need for up-front capital investment. All you need to start using the Internet Manager is a standard Web browser and your path to success is exceptionally shortened. Activation of the Internet Manager usually takes less an hour, compared to weeks or longer with traditional client/server software. As a result, you'll begin to experience ROI sooner rather than later.

...a new and unique code for each user using eKey technology for access.

Devices enabled with eKey technology are unique in their ability to control user access to a device with no additional programming after the initial set up. Once programmed, an eKey enabled device only needs to be touched for an audit or for maintenance, making eKey enabled devices a perfect solution for remote locations or facilities where date and time sensitive keys are a solution.

With an eKey enabled device, there are no keys or cards to compromise and no codes to delete, because no codes are ever programmed into a device. eKeys are generated for a specific device, beginning on a specific date and time, and is valid for a specific duration. Each variable is defined at the time of the eKey generation. When used, eKeys are evaluated for validity using the variables input at the time of generation. Therefore, each eKey is unique providing increased security and flexibility where access control is needed for a specific user and for a predetermined period of time.

...focus on your business, not on technology.

Access control devices should solve your business problems, not create more headaches. With eKey enabled devices and the Internet Manager, you'll be free to focus on your core business, not worry about infrastructure requirements, maintenance, and upgrades at the same time providing controlled access to users for a finite period of time.

With a flexible architecture that allows immediate delivery of services, upgrades and eKey generation, Rentallock is creating new and unique ways of creating powerful, enterprise access control solutions for companies at a reasonable price.

BENEFITS

- Anytime availability via Internet accessible computer.
- Unlimited users, Administrator or User.
- Unlimited access control devices.
- Full eKey audit capabilities.
- Recording of User Assignable code information.
- eKey generation reporting.
- Device maintenance scheduling system.
